#### NOTICE.

In again presenting my SPRING CATALOGUE, I take pleasure in calling attention to my Largely Increased Stock of new and desirable Plants. I would call special attention to my New double and Single Zonale Geraniums, Coleus, Carnation Pinks, Roses, Verbenas, etc., etc.

When selections are left to me, the very finest varieties and the most vigorous Plants will be sent, as all orders are filled under my personal supervision. All orders filled as sent, if in my power to do so; and in all cases of substitution, the purchaser has the right of rejection, and return of the price paid, in case the substitution shall prove unsatisfactory.

Great care will be taken in packing stock ordered from me, and no charge made for packing and delivering Flowering Plants at the Depot in this place. The prices given are for stock at the Nursery or Railroad Depot.

Orders from unknown correspondents, unless accompanied by a remittence or satisfactory reference, will be sent by express "C. O. D."

Great care should be taken by correspondents to give Post-Office, County and State, as also, the mode by which Stock ordered, is to be sent.

I issue four Catalogues, any or all of which will be sent free, on application.

## New Plants and Novelties.

(IMPORTATIONS OF 1870.)

#### NEW DOUBLE GERANIUMS.

But few years have elapsed since the introduction of the Double Geranium in this country, and not until within a very recent date, has there been sent out desirable flowering varieties. At great expense, and considerable trouble, I have succeeded in securing a very superior collection of the very best varieties yet sent out. They are well adapted to either garden or pot culture, and when in full bloom, present a most attractive appearance, each flower rivaling in beauty a well arranged boquet.

Price 50 cts., for small plants, 21/2 inch pots.

CAMELLIA FLORA, (Lemoine.) This is one of the most beautiful varieties in the double flowered section, that I have seen. In addition to its free and vigorous, yet compact branching habit of growth, its bloom trusses are the largest in its group, with well formed blossoms, opening to nearly the size of a half crown, and in color, of the richest rose.

LE DUC DE SUEZ, (Lemoine.)—Flowers of excellent shape, almost imbricated, very desirable, scarlet crimson, the darkest of all the double varieties sent out; trusses of large size. Habit of the

plant dwarf, and very free flowering.

MADAME MICHEL BÜCHNER. (Lemoine,)—Vigorous plant, free flowering both in and out of doors; flowers very double, well shaped and borne in trusses of about six inches in diameter. The color is of a delicate rosy salmon.

MADAME RUDOLPH, (Lemoine,)—Plant of short jointed habit, producing trusses of average size; flowers of a dark carmine rose, with brilliant gloss. The darkest and most brilliant of all

the rose-colored double varieties.

MARIE LEMOINE,—Fine, large double pink; dwarf, compact and free flowering.

MADAME LEMOINE,—Same as the above, but more upright growing.

WILHELM PFITZER, (Lemoine,)—Dwarf, free blooming habit a brilliancy of color. The individual flowers are large, very double of the most perfect shape, and dazzling orange, scarlet color.  VICTOR LEMOINE, (Lemoine,)—Truses about eight inches in ameter, with flowers of very large size, well formed and very full; color, finest scarlet; a most excellent bedder.  EMPRESS EUGENIE.—Vivid rose color; immense truss, of gree beauty, color very distinct.  TERRE PROMISE, (Lemoine,)—Trusses about seven inches in ameter, flowers very double and well formed; color, light popered, very light, small zoned leaf—a new color.  SAPEUR POMPIER, (Lemoine,)—Flowers of the largest size, very double, well shaped; color, orange scarlet, trusses of enormous size, 5½ to 6 inches in diameter, foliage with well defined zone.	di- ery eat di- py ery
OLDER VARIETIES,	
But not by any means inferior to many of the new ones.	
GLORY DE NANCY,—Large truss, free grower and bloomer; color, rosey scarlet. TRIOMPH DE LORRAINE,—Rosey carmine, occasionally striped white; large truss, free bloomer.  NEW GERANIUMSSILVER AND GOLD.	ets. 25 25
(IN TWO INCH POTS.)	
BIJOU,—Leaves round, silver margined, good bedder; flowers dazzling scarlet.  FLOWER OF THE DAY,—Leaves green, margined with creamy white.  GLOW WORM,—Sulphur white, with bronzy zone, crimson tinted.  GOLDEN BIRCH,—Large green leaves, gold margin, fine vigorous grower.  MISS KINGSBERRY,—Leaves margined, clear, silver white  SUN SET,—Ground color, golden yellow; varied with crimson,	25 25 35 35 25
black and green  MRS. POLLOCK,—Dwarf habit; leaf margined yellow, with a broad band of green, and a zone of bronze, shaded and splashed crimson, with the center deep green  LADY PLYMOUTH,—Variegated rose, beautifully marked with	35 35
green and white.  HOLLY WREATH,—A new variegated variety, of free growth.  DUKE OF EDINBURG,—Light, golden yellow band, ground, leaves green, blotched and margined with white.  ALMA,—Silver edged foliage.  GOLDEN CHAIN,—Compact, gold edged.  LUNA,—Chocolate zone; free grower, scarlet flowers, extra. #### NEW HYBRID PERPETUAL PELAR GONIUMS.

(IN TWO INCH POTS.)

This is a new section of Bavarian origin, recommended for
their free blooming character, said to bloom from spring to
autumn. Having purchased this variety of Henry A. Dreer,
of Philadelphia, the past season, I send them out wholly on
his recommendation, having full faith in his word.

SIR LAMES ASHER Scarlet white and rose	25

#### BRUGMANSIA.

each ets.

BRUGMANSIA SAUVEOLENS,-An exceedingly interesting green-house plant, attains to the height of five feet, branching like a dwarf tree, foliage large, bright green, covered with semi-double bell shaped, pure white flowers, 8 to 10 inches long, and from 6 to 8 inches wide; from November to January, very fragrant. Should be planted out in the garden in the spring, and lifted and taken to the house in time to escape 

#### NEW HELITROPES.

SUPERBA, deep blush, good bloom- | MAD. PFITZER, large blue, white

ETOILE Bordelaise, lavender blue.

GARIBALDI, almost white. LITTLE NEGRESS, dark violet. MADAME MITCHELL, light blue. Elegans, (dwarf,) dark violet.

CHIEFTAIN, light mauve.

JANE MISNER, light blush, very

fragrant. PERVUIANUM, light blush, yellow

Price in two inch pots, 20 cts. \$2 per doz.

eve.

#### OLDER VARIETIES.

TRIUUMPH DE LIEGE, light color. | Col. Voltinbert. Miss Nightingale, dark extra. Elegans, violet blue, light center.

Price 20 cents: \$2 per doz.

MAD. RENDALTBER, light colored. bushy.

The Helitrope is highly esteemed for its delightful fragrance. Equally good for the border or pot culture; blooming profusely through summer and autumn, and when removed to the conservatory or green house, throughout the winter.

#### NEW LANTANAS.

These plants are of a very shrubby nature, and profuse bloomers all summer. They embrace all colors, from white to rosey purple. Price 25 cts. each. \$2,50 per doz. in 2½ inch pots.

AURANTIACA, bright orange. EUGENIE, rose and white. GRAND SULTAN, purple & yellow. LINA ETIGER, straw color, dwarf, profuse bloomer.

Princes Clotilla, pink, yellow center.

Charlotte, dark rose, vellow cen-

FULGERS, yellow and orange. Magnum, large white, vellow cen-

Moureck, crimson, compact habit. Alba Perfecta, dure white.

#### OLDER SORTS.

ADOLPHUS AVAS, canary, dark | Alba Lutea, yellowish white. center.

Delicatisima, lilac.

Countess DE Morna, vellow and

LILACENA, lilac.

ABBIE SOUTHERN, orange yellow. MUTABILIS, variable, mostly or-

#### REMONTANT; or, Monthly Carnation.

Of this very desirable and valuable plant I have a very fine collection, embracing all the best varieties yet sent out. A very valuable plant for either summer decoration of the flower garden or for winter blooming in the parlor or green house, flowers of nearly all shades and markings. Most of them are delightfully fragrant.

ASTORIA, yellew, scarlet striped. BRILLIANT, rosey scarlet. DE FONTAINE, buff striped, DEFIANCE, dark maroon. GRAND CONDE, white mottled pink.

Guide, dark einnamon, stupid, stale.

La Purete, carmine

LA GRANDE,

LITTLE BEAUTY, yellow rose edge. MANA CABLE, light crimson.

Rose Dale.

PRESIDENT DE GRAW, pure white, one of the best.

STAR, pink, mottled with white.

Valliant, light scarlet, profuse bloomer.

Price in 2½ inch pots, 25 cts.; 3 inch pots, 35 cts.

Brightness, rich searlet. Betsy, large, brilliant scarlet. DIADEM, yellow, red edge. GEN. GRANT, pure white. EDWARSA, pure white.

LA GRANDUR, large, bright crim-

LA PURETE VERIGATA, rose, striped with white.

GEN. VON MOLTKA,

Mount St. Bernard, fine scarlet PURPLE CROWN. RADETZKY, rose, with broad violet

purple stripes.

Perfection, light purple. THE SPORT, rich crimson, large.

#### BOUVARIDA.

This is a shrubbery plant indispensable, both for the green-house and border, blooming from June until frost, in open ground, when they may be removed to the green-house, where, with proper treatment, they will bloom throughout the winter.

BRILLIANT. Hogarth, light carmine. Rosalind, salmon pink.

JAQUINEFLORA, pure white. SCIANTHA, dazzling scarlet.

Price in two inch pots, 25 cts.; \$2,50 per doz.

#### CHRYSANTHUMUM---Large Flowering Varieties.

The popularity of this class of plants is increasing every year, and but few plants have been more improved the past few years; perfectly hardy, of easy culture, adapted alike to the flower garden, green house and parlor, blooming in late autumn when most flowers have been cut off by the frost, and if removed to the green house, conservatory or parlor, will continue to bloom until the holidays.

Sparkler, red tinted orange. Crimson Violet, deep rich crimson.

MARGARET OF ANJOU, nankeen yellow.

RED DRAGON red tipped yellow.

Red Dragon, red tipped, yellow, immense size.

ROBERT JAMES, cinnamon orange. GRAND TURK, purple, 8 inches in diameter.

ERECTA SUPERBA, canary yellow, fringed.

WIZARD, bright red, form of loose tassels.

Price in two inch pots, 20 cts.; \$2,00 per doz.

#### POMPONE --- Or Small Flowering Varieties.

EMILE BEHOREL, quilled, pine white.

Mad. Grame, pure white. LITTLE BEAUTY, white bordered, delicate pink.

MAD. DOMAGE, clear white.

Torrida, golden amber, extra dwarf.

Boule de Niege, white, yellow centre.

FAIRY NYMPH, pure white.

Price in two inch pots, 20 cts.; \$2 per. doz.

each cts

#### PENSTEMONS.

#### (IN TWO INCH POTS.)

This is another popular flowering plant, fast coming into universal favor. The following list will be found quite distinct and very showy.

EUCLID,—Purple, scarlet tip and blue throat	20
DR. HOGG,—Carmine scarlet, tube white	20
DE CASSAINE,—Bright rose, throat pure white	20
TOM POUNCE,—Bluish shaded, crimson	20
MAD BOBINSKY,—Purple, violet-veined rose	20
IRIS,—Light purple	20
GENTIANOIDES,—Rosey red	20
RUBENS MAGNIFICIENS.—Rose, scarlet throat	20

#### VERBENAS.

Following up the course marked some years since, viz: Raising seedling Verbenas in large quantities each year, and selecting therefrom a few of the very best to propagate from and send out to my customers, I (the past season,) selected thirty-six with distinct colors and markings, and in my judgment, equal to any thing in that line that has been sent out east or west, and which I offer to my customers at reasonable rates, confident that they will give general, if not universal, satisfaction.

YUCCA FILAMENTOSA, (Adam's Needle,) A very showy ever-	
green plant, perfectly hardy, thriving in any good garden soil.	
foliage twelve to eighteen inches long, resembles the palm or	
aloe flower; stems attain the height of from five to six feet,	
covered the entire length with bell-shaped, creamy white flow-	
ers, in bloom a long time; strong flowing plants. 50 cts. to 1	00
TROPÆOLUMS,—A family of graceful climbing plants, fine for	00
trellises, free growers and profuse bloomers; double and	
single	20
NIURMBERGIA GRACELLIS,—A most beautiful border blant,	
flowers nearly white, most profuse bloomer. \$1.00 per doz.	10

#### DAHLIAS.

This old, popular flower has been greatly improved within the past half century. It was first introduced into England in

1789, but little noticed, and soon lost. It was introduced from Mexico in 1804—a single purple flower of not much beauty. From the single purple, all the varieties now extant, have been produced. It was not introduced into this country until in 1825, and was at first sold at exhorbitant prices, in some instances, as high as twenty-five, thirty, and in a few cases, fifty dollars each.

About forty years ago some enterprising florists took it in hand and have from time to time brought forward greatly changed and improved varieties, until the list is so extended as to embrace flowers of all the colors, shades and hues found in the rose family, with forms, surpassing that Queen of flowers, in all the requisites of a perfect bloom. Then, again, the Dahlia is of easy culture, and giving a profusion of bloom in the fall of the year, when most other flowering plants have ceased to be attractive. The Dahlia should be staked, and is the better of being pruned, by removing a portion of the side shoots and pinching off the first flower buds that make their appearance. So soon as nipped by frost, the stalks should be cut off close to the ground, and after allowing them to remain for a few days, the stools, lifted carefully, dried and put away in sand and kept through the winter in a dry cellar or some other similar place, where frost will not reach them.

We number our Dahlias, so that they may be ordered, by giving the numbers only, without naming the varieties wanted. Our plants will be ready to send out by the first of May, that being as early as they should be planted. We have a large variety, and, as we think, in quality, equal to the best.

#### Description.

No. 1. AUGUSTA TRAPP, delicate, buff tinged rose, very perfect; small flower, 4 feet, extra.

BICOLOR, crimson scarlet, back of petals yellow, globular,

- very fine, small flower. RIVAL, OR CAMELIA, light, cherry red, very fine camelia-66

. 62. DEUTCHER LEIBLINGS, white, with brilliant purplish scarlet, beautiful color.

" 63. DINTER, (Degen,) agate, carmoison, very fine, " 64. DR. SCHWEBS, bright scarlet, very neat; 2 feet.

" 65. FRIEDENS ENGLE, white, variegated with rose, changing to fiery dark purplish crimson; 4 feet.

" 66.

INDIAN BOY, buff. KLEINOR OSCAR, fine carmine violet, globular. . 67. KLEINE EDETDAME, blush, tipped with crimson. .. 68. 4 69. GLUCHUNERMCHEN, fiery scarlet; 11/2 feet.

" 70. ANNIE, scarlet; 4 feet.

" 71. DINTER AGATE, carmoison: 3 feet.

. 72. J. MARTENS, lemon vellow, rich bloomer; 3 feet. LITTLE PHILIP, buff, tinged with purplish rose. .. 73.

" 74. SILVER BUD, silvery lilac; 3 feet.

" 75. SNOW FLAKE, pure white. Price of thrifty plants in 2½ inch pots, 15 cents; \$1,50 per doz.

#### New Dwarf.

. 76. BAREDAIS, milk white, back of petals rose; 2 feet.

.. 77. DWARF QUEEN, brownish violet, sometimes white tip; 2 feet.

.. 78. PAULIN, blackish cherry red, with fiery crimson and fine white tips; 2 feet.

.. 79. PEARL, pure white, extra; 1½ feet; 50 cents.

. 80. STAR OF REITLINGEN, sulphur yellow, rich bloom; 2

.. 81. TOM POUSE, reddish purple, very large, rich bloomer, plants very stout and erect; 2 feet; 50 cents.

Price, 20 cents each; \$2 per doz.

#### GLADIOLUS.

The Gladiolus is of very easy culture and succeeds well in any ordinary garden soil. The new French Hybrids are a great improvement on the old sorts and are attracting universal attention wherever planted out. Our stock embraces some

of the best yet sent out, and will be found first class bulbs in all instances. The bulbs may be planted out so soon as the frost is fairly out of the ground in the spring and all danger of freezing is over. A succession of planting may be had every two weeks, until the middle of June, in order to secure a succession of bloom until late in the fall. The plants should be well staked, and when the frost has killed the leaves, or before, if the leaves by turning yellow show the ripening of the bulbs, the bulbs should be taken up, dried rapidly in full sunlight, the new bulbs separated from the old, and the flowering bulbs (the stock being cut off about one inch from the corner of the bulb) put up in paper bags and carefully labelled and kept dry during the winter in a dry, cool situation, free from frost.

#### French Hybrid.

#### LIST OF NAMED VARIETIES.

each	cts.
AMABILIS, bright vermillion stained with yellow,	20
BERENICE, rose, variegated with red and stained with carmine,	25
BRENCHLEYENSIS, deep scarlet, splendid for clumping,	20
CALENDULACÆUS, bright nankeen yellow,	30
COURANTI FULGENS, brilliant crimson,	15
DOCTEUR ANDRY, very bright orange, fine shape,	25
JOHN BULL, yellowish white, very fine,	25
LOUIS VAN HOUTE, velvety carmine, with purple stain,	20
MABS, beautiful scarlet,	25
OTHELO, light orange red, dwarf and very fine,	20
PENELOPE, french white, striped with carmine,	35
REMBRANDT, deep scarlet,	25
VESTA, pure white, stained with purplish carmine on yellow	
ground,	35

Besides the foregoing named varieties, we have a splendid collection of mixed varieties, embracing all the colors and shades. Price, 15 cents; \$1,50 per dozen.

#### ACHARANTHUS.

#### (IN TWO INCH POTS.)

As a bedding plant	mixed with	other plants,	of	light	color-
ed foliage, it has no su	aperiors.				

· · · · · · · · · · · · · · · · · · ·	
ACHARANTHUS VERSAFFELTI, foliage pink violet, shaded	
with crimson, 2	20

corolla white, very full, feathered with rose,	25
la. \$2 50 per doz.,	25

## The Rose.

I take great pleasure in presenting the following list of very choice Roses, propagated on their own roots, most of which I can recommend for their exquisite beauty, as well as their free blooming qualities. The Rose, although a universal favorite, seems to be but poorly understood; or at least, I conclude such is the fact from its almost universal bad treatment. It is true that it will live and give some bloom in sod and weeds, but there is no flowering shrub or plant that so liberally rewards its owner for generous treatment as the Rose,

The soil should be rich and well drained, situation warm and well

The soil should be rich and well drained, situation warm and well exposed to the sun, the border kept free from weeds and the bushes tastefully pruned in the latter part of winter or in early spring and with good selections, satisfactory bloom may be reasonably counted

on every season.

#### H. P. ROSES.

This class is perfectly hardy and noted for their brilliant colors, fine forms and in many instances free blooming qualities. Being perfectly hardy and comparatively cheap, should be found in every garden.

MISCELLANEOUS.		
GEORGE IV., large and full, deep crimson,		50 50

Besides the foregoing, I have upwards of one hundred varieties of roses on trial. The past season was so dry and unfavorable for plant growth, that my tests were not satisfactory, hence, shall give them another trial before adopting or rejecting any or all of them. In the fall of 1872 and spring of 1873, I will offer for ale such of my new roses as may, on thorough trial, prove worthy. At the same time, I reserve to myself the right of ma king choice of varieties to be sent out at catalogue for ices. I will, in all cases, send none but good varieties, and so far as in my power, fill orders as given.

MAD. PLANTIER, pure white, blooms in clusters, .....

## NEW FEATURE IN THE FLORAL BUSINESS.

### HYACINTHS IN BLOOM.

My customers who visit my grounds in early spring and witness my fine display of Hyacinths and Tulips in bloom, in the open border and bed, express great admiration and delight, and appear greatly disappointed, when told that they cannot be lifted and potted at that time in the season, without injury, if not destroying the existing bloom, hence, are not for sale. With a view of meeting this difficulty, I selected last fall, several hundred of my best Hyacinth bulbs, together with some Tulips and Crocus, put them in pots and placed them in a position to secure a good bloom by early spring, and now, for the first time, offer them to my customers at a slight advance on the price for bulbs alone. Will be sent out just starting into bloom, or in full bloom, as may be desired. Descriptive catalogues will be sent free, on application.

Price in 4 and 5 inch pots, for Hyacinths, 40 cts., \$4 00 per dozen. "per ½ doz. in 4 and 5 inch pots, for Tulips, \$1 00 per pot.

### FLOWER SEEDS.

This is another new feature with me, brought about by constant enquiry for flower seeds, by my customers, to meet which I have made arrangements with one of the most extensive and reliable seed firms east, which will enable me to supply my customers with fresh flower seeds at eastern rates. Catalogue sent free on application.

### PLUMS, APRICOTS AND NECTARINES.

I neither cultivate nor sell either of the above named fruit trees; the first and last, because very little fruit ever matures in this part of the country. The other, for the same reason, with the additional reason, that the trees are very liable to winter kill.

### QUINCE.

ORANGE.—Large, roundish, with short neck, bright golden yellow. For general use this is the best of the quince family. Price. 50 cents.

### HARDY, NATIVE GRAPES.

After testing upwards of forty varieties, we can recommend but comparatively few for general planting; hence, have left all others off our list.

The grape will succeed well in any good corn land. All the old notions of ditching, trenching and bones, have been forced to one side by practical common sense.

The grape does best on land naturally or artificially well drained, and so does corn, potatoes, or in fact, any and all of the farm crops;

either may live and make some growth on wet, spongy lands, but

neither will give profitable returns.

Neither corn nor potatoes will do much good, if just stuck in the ground and left to the mercy of the grass and weeds, that will soon surround and devour them; and just so with the grape vine, both require proper treatment, otherwise disappointment surely follows, providing you are silly enough to expect anything like profitable re-

turns from your investment.

As first stated, select for your grapes ground naturally dry, or if not dry, make it so by drainage. If very poor, enrich it by the use of well rotted stable manure, and then dig holes from 12 to 15 inches in depth, of about the same width, fill up the hole to the required depth for the vine with goed soil, and place in your vine, being careful to spread out the roots and thoroughly cover them with well-pulverized, good soil, using your foot to press it down firmly, but not severely. When the hole is well-filled, your work of planting is over and you have nothing else to do the first season, except to keep down the grass and weeds, just as you ought to do with your corn and potatoes. After the first summer's growth is over, say about the last of November, trim your vines, by cutting off the current year's growth, leaving not more than three eyes, and either put down your stakes and posts preparatory to training pour vines. If you intend using stakes only, it would be the better course, to plant them with the vines. If trellis, put down your post at the end of the fruit season and you will be ready for training your vines, when they shall attain sufficient length to require it. Allow as many shoots to start the second spring as may be, and when they have attained four or five inches, rub off all but two of the strongest and nearest the ground, and train them to the stakes or bars, keeping down all others as they make their appearance. The ensuing fall, cut back your vines to the length you want them, and the following season you will be likely to have some fruit. In all subsequent prunings, be certain to so shape or prune your vines, as to leave new lanes for the ensuing year's crop.

#### LIST.

CONCORD—A large, black, handsome grape, very valuable, because of its hardiness and productiveness, bunch and berry large, compact, shouldered, berries black, covered with bloom; flesh juicy and sweet. Middle to the last of August.

DELAWARE—This is one of the finest native grapes. The vine is a slender, rather tardy grower, very hardy, and in some locations, quite prolific; bunches small, compact and shouldered; berries small, thin skin, clear, beautiful amber color, covered with a lilac bloom. nearly translucent; pulp sweet, tender, vinous and delicious; wood very firm, short jointed and somewhat difficult to propagate; ripens in this part of the country about the time of the Concord. Price. 25 cents.

HARTFORD PROLIFIC-Hardy, vigorous and productive:

bunch large, shouldered, rather loose; berry full medium, globular, with perceptible foxy flavor; skin thick, black, covered with blue bloom; flesh sweet and juicy, much better here in the west, than at the east. Ripens about ten days before the Concord. Price, 25 cents.

IVES' SEEDLING—Origin, Hamilton county, Ohio, and is becoming one of the most popular early, hardy grapes; bunch medium, compact, shouldered; berry rather below medium, black, oblong, juicy, sweet and well flavored; ripens about the time of the Hartford vine; vigorous and healthy. So far, neither fruit nor foliage, have been affected by disease. Price, 25 cents.

IONA—This magnificent grape rots its fruit so badly, that we have ceased to propagate it to any extent and only offer it for sale in limited quantities. Besides the foregoing, we have many other varieties, but none in our estimation, worthy of general cultivation, when better may be had.

## Small Fruits.

### CURRANTS.

The currant is indispensable to every garden, and is deservedly one of the most popular of the small fruits. No fruit is more healthy, or susceptible of a greater diversity of uses, or that more fully repays for good culture and treatment. At the same time, that it will live and bear fruit under most shameful neglect, it will more than compensate the cultivator for good treatment. Instead of being stuck to one side and allowed to shift for itself, as is too frequently the case, the currant should be set in rows not less than six feet apart; plants five feet apart in the rows, cultivated and manured every season, and all the old dead or decaying shoots carefully removed.

The following sorts embrace only those we can recommend for their

good qualities, for hardiness and fruit:

CHERRY—Fruit large, bunches short, berries deep red, quite acid; moderately vigorous and productive. Price, 15 cents each, and \$1 50 per dozen.

LA VERSILLAISE—Similar in size to the cherry; bunches longer; berries a handsome deep red; vigorous and productive; sub acid. Price, 15 cents each, \$1 50 per dozen.

VICTORIA—A celebrated late variety, with long bunches of bright red fruit, will hang on the bushes some two weeks longer than other currants. Price 15 cents; \$1 50 per dozen.

WHITE GRAPE—One of the finest currants in cultivation; bunches medium; berries rather large, yellowish white, very sweet and good; very productive. Price, 15 cents; \$1 50 per dozen.

RED DUTCH—An old and well known sort; fruit medium, deep red, rich acid flavor and very productive. Price, 10 cents; \$1 00 per dozen.

### BLACKBERRIES.

The blackberry is of the easiest culture, and ripens immediately after the raspberries, thus extending the season for berries into September. They will do quite well on almost any kind of soil, except very light, sandy soil. Plant in rows the same as recommended for currants, and when the canes attain to the height of about four feet, pinch off the top, this will cause the canes to thicken and throw out side branches, and the bushes become quite stocky and thereby improve the quality, as well as increase the quantity of fruit.

THE LAWTON—This old and well tested variety, like the Wilson strawberry, although not of first quality, stands at the head of the list as a market berry. Fruit from large to very large, wonderfully productive, deep jet black, sweet and excellent flavor when fully ripe; when gathered too early, acid and insipid; ripens all through August.

KITTATLINNY—This is comparatively a new variety, perfectly hardy and quite productive. Fruit large, deep black, sweet and fine; quality better than the Lawton, but softer and not so well calculated to stand transportation to market.

WILSON'S EARLY—This is another new variety, and so far as tested in the west, has not sustained its eastern reputation for productiveness. Trailing habit, so far perfectly hardy on our grounds; berry large, black, juicy and sweet; but not very productive. Price, 10 cents each; \$1 00 per dozen.

### RASPBERRIES.

The raspberry is justly held in high estimation as one of the most healthful, refreshing and pleasant sub-acid fruits. Treatment similar to that recommended for the blackberry. After testing many varieties, we have discarded all but the following, as being unfit for general cultivation:

DOOLITTLE'S BLACK CAP—Berry large, sweet and well flavored; canes strong, upright, healthy and very productive.

PURPLE CANE—Fruit large, sweet and of good flavor, but rather soft for market; hardy and productive.

OHIO EVER-BEARING—Fruit in size and appearance, similar to the first, but not so productive, especially of a dry season. Bears a fall crop, but not in great abundance, as has been claimed for it. Perfectly hardy, and like the two preceding, does not sucker. Price, 10 cents each; \$1 00 per doz.

Besides the foregoing, we have several other varieties on trial, which we shall adopt and recommend, or reject and discard, according to their merits or demerits.

### GOOSEBERRIES.

The gooseberry thrives best in strong, deep, rich loam, and should be planted in the open border, and not under trees as is frequently done. We have discarded all the fancies and only retained Houghton's Seedling. Fruit medium, skin smooth, changing from pale red to almost purple when fully ripe; sweet and good, never mildews. Price, 10 cents each; \$1 00 per dozen.

### STRAWBERRIES.

The strawberry is one of the most delicious and popular of the small fruits, easily grown and should be found in every garden. The best soil is a deep, rich loam, which should be thoroughly pulverized to the depth of fifteen inches, and if large, nice berries are desired, the runners should be cut off as they appear, and thorough culture should be given. We have thoroughly tested many varieties and only found the following profitable:

GREEN PROLIFIC—Fruit uniformly large, light red, sweet and pleasant, very productive. Should be alternated with the Wilson or some other staminate variety. Price, \$1 00 per 100; \$8 00 per 1000.

JOCUNDA, (KNOX'S NO. 700)—Fruit very large, conical, bright red and quite productive when grown on clay loam, in hills. Price, 50 cents per dozen; \$2 00 per 100.

TRIOMPH DE GANA—Berry large, conical, deep red, productive in hills. Price, 25 cents per dozen; \$1 00 per 100.

WILSON'S ALBANY—Large to very large, dark red, firm, hardy and very prolific. Price, 25 cents per dozen; \$1 00 per 100; \$5 00 per 1000.

### RHUBARB.

MYATT'S LINNÆUS—The largest and best in cultivation. Price, from 15 to 25 cents.

### ASPARAGUS.

GIANT—One year; \$2 00 per 100.

CONOVUS COLOSSAL—One year; \$3 00 per 100.

EVERGREEN TREES.	
The spring of the year and early summer are the best and safest times to transplant evergreens; and when taken up,	
preparatory to transplanting, great care should be taken to	
prevent the tender rootlets from exposure to either sun or wind, as either will endanger the life of the tree. After be-	
ing carefully put in the ground where they are intended to remain, the top dirt should be lifted to the depth of four or	
five inches, as often as once in two weeks during the dry part of the first season, and the tree or trees watered, and the re-	
moved earth returned to its place. If not exposed in taking up and being transferred from the nursery to their future	
homes, and treated as before instructed, ninety per cent. will	
live.	cts.
